M. Sc. (Computer Science) – 2023 Curriculum

Course Code	Semester – I	Credits
CS7101	Mathematical Foundations of Computer Science	3
CS7102	Networking Technologies	3
CS7103	Data Structures and Algorithms	3
CS7104	Problem Solving using Python and R	3
CS7105	Operating Systems Fundamentals	4
CS7106	Data Structures Lab	2
CS7107	Python and R Lab	2
	Total Credits	20

Course Code	Semester - II	Credits
CS7151	Computer Organization and Architecture	3
CS7152	Theory of Computation	3
CS7153	Advanced Statistical Techniques for Data Science	3
CS7154	DBMS and Data Mining	3
E1	Elective I	3
CS7155	FOSS Lab	2
CS7156	DBMS and Data Mining Lab	2
	Total Credits	19

Course Code	Semester - III	Credits
CS8101	Web Computing	3
CS8102	Artificial Intelligence and MachineLearning	4
CS8103	Object Oriented Software Engineering	3
E2	Elective II	3
E3	Elective III	3
CS8104	Artificial Intelligence and MachineLearning Lab	2
CS8105	Project Work Phase-I	2
	Total Credits	20

Course Code	Semester - IV	Credits
CS8151	Project Work Phase – II	10
	Total Credits	10

Summary:

Branch	I Sem	II Sem	III Sem	IV Sem	Total
CSE	20	19	20	10	69

Electives:

Course Code	Electives	Credits
	Elective -I	I
CS7111	Internet of Things	3
CS7112	Cyber Security	3
CS7113	Cloud and Edge Computing	3
CS7114	Mobile Computing	3
CS7115	Cryptography and BlockchainTechnology	3
CS7116	Computer Graphics	3
	Elective -II	
CS7117	Big Data Analytics	3
CS7118	Computational Intelligence	3
CS7119	Computer Vision and PatternRecognition	3
CS7120	Soft Computing Techniques	3
CS7121	Defensive and Secure Software Development	3
CS7122	Software Verification and Validation	3
	Elective -III	
CS8111	GPGPU Programming	3
CS8112	Design Patterns	3
CS8113	Compiler Design	3
CS8114	Mobile Application Development	3
CS8115	Augmented Reality and Virtual Reality	3
CS8116	Fault Tolerance Systems and Techniques	3

FIRST SEMESTER

Course Code	:	CS7101
Course Title	:	Mathematical Foundations for Computer Science
Number of Credits	:	3-0-0-3
Prerequisites (Course code)	:	None
Course Type	:	Core

Course outcomes: At the end of the course, the student will be able to:

CO1	To acquire skills in solving mathematical and logical problems
CO2	To comprehend mathematical principles and logic.
CO3	To understand fundamental concepts and tools in discrete mathematics with
	emphasis on their applications to computer science.

Course Content:

Set Theory: Sets and operations, properties - power set - methods of proof - relations, graph, and matrix of a relation - partial and total orders, well ordering - equivalence relations, classes and properties - functions, 1-1, onto and bijective - composition of relations and functions - inverse functions.

Mathematical Logic: Propositions and logical operators – Truth table – Equivalences and implications – Basic laws– Some more connectives – Functionally complete set of connectives – Review of Propositional Calculus - Validity - Satisfiability related concepts - CNF and DNFforms - Conversion of arbitrary propositional formula to CNF or DNF.

Graph Theory: Definitions and basic results - Representation of a graph by a matrix and adjacency list - Trees - Cycles - Properties - Paths and connectedness - Sub graphs - Graph Isomorphism - Operations on graphs - Vertex and edge cuts - Vertex and edge connectivity, Spanning Trees, Euler circuits, Hamiltonian graphs.

Probability Theory: Sample Spaces- Events - Axioms – Counting – Conditional Probability and Bayes' Theorem – The Binomial Theorem – Random variable and distributions: Mean and Variance of a Random variable - Binomial-Poisson-Exponential and Normal distributions, Correlation and Regression.

Sampling Distributions and Descriptive Statistics: The Central Limit Theorem, Distributions of the sample mean and the sample variance for a normal population, Sampling distributions (Chi Square, t, F, z). Test of Hypothesis- Testing for Attributes – Mean of Normal Population – One-tailed and two-tailed tests, F-test, and Chi-Square test - Analysis of variance ANOVA –One way and two-way classifications.

- 2. Kolman, Busby and Ross, "Discrete Mathematical Structures", 6th Edition, PHI, 2013.
- 3. Sheldon M. Ross, "Introduction to Probability and Statistics for Engineers and Scientists", 6th edition, Academic Press, 2020.

Course Code	:	CS7102
Course Title	••	Networking Technologies
Number of Credits	:	2-1-0-3
Prerequisites (Course code)	:	None
Course Type	:	Core

CO1	List the functionalities of networking layers available in both OSI reference model
	andTCP/IP model.
CO2	Describe available LAN and WAN Technologies.
CO3	Describe the principles of packet switching, forwarding, and routing.
CO4	Distinguish between TCP and UDP packet formats
CO5	Describe the available application protocols and networking services.

Course Content:

Computer network - Network interface card (NIC) – Communication Media - Networking Devices: Hub, Switch, Router and Firewall -Network Protocols – Service Identification -IPv4 Addressing System - Subnetting – Supernetting - IPv6 Addressing System - Circuit Switching -Packet Switching.

Network Topologies -Network Architectures - Open System Interconnect (OSI) Reference Model - TCP/IP Model - TCP Operation - UDP Operation - Congestion control – Flow Control – Error Control.

LAN Components –Packet Switching and Forwarding - LAN Technologies: Ethernet (IEEE 802.3), Token Bus, Token Ring - Wireless LAN (IEEE 802.11) - Virtual LAN (VLAN).

WAN Components - WAN Technologies – WAN Encapsulation - Routed Protocols (IP and IPX) - Static Routing - Dynamic Routing - Routing Protocols - Virtual Private Network (VPN) -Software Defined Networking (SDN).

Point-to-Point Protocol (PPP) - Logical Link Control Protocol (LLC) - Address Resolution Protocol (ARP) -Internet Control Message Protocol (ICMP) - Dynamic Host Configuration Protocol (DHCP) - Domain Name System (DNS) – HTTP, HTTPS - File Transfer Protocol (FTP) - Simple Mail Transfer Protocol (SMTP) - Remote Administration Protocols: Telnet and Secure Shell (SSH).

- 7. Black, Chuck., Goransson, Paul., and Culver, Timothy. "Software Defined Networks: A Comprehensive Approach". Elsevier Science, 2016.

Course Code	:	CS7103
Course Title	••	Data Structures and Algorithms
Number of Credits	:	2-1-0-3
Prerequisites (Course code)	:	None
Course Type	:	Core

CO1	Develop own ADTs according to the nature of problems
CO2	Design algorithms using various strategies
CO3	Compute time- and space complexities of various algorithms

Course Content:

Linear data Structures – Arrays, Records, Linked Lists – Singly, Doubly, Circular linked lists – Stacks: operations and applications, representing Stacks - Queues: operations and applications, representing Queues, types: priority queue, Deque, IRD, ORD – Linked Lists and Applications – Hashing.

Non-Linear data Structures - Binary Trees – Binary Tree Representations – Binary tree Traversals – Binary search trees: Definition, operations - B-trees: Definition, operations – Fibonacci heaps: Definition, operations - Graphs – Matrix and list Representations – Graph Traversals - Data structures for disjoint sets.

Algorithms – Definition and Algorithms as a technology – Design and Analysis of Insertion sort, merge sort, heap sort and quick sort – order statistics - Recurrences and Solvingrecurrences - Asymptotic notations.

Divide-and-Conquer - The maximum-subarray problem, Multiplication of two large integers, Strassen's algorithm for matrix multiplication - Dynamic Programming – Elements - Matrix- chain multiplication, longest common subsequence (LCS), Optimal binary search trees.

Greedy Algorithms – Elements - An activity-selection problem, Huffman codes and MinimumSpanning tree algorithms - Backtracking and Branch-and-Bound strategies with applications –NP concepts - Introduction.

- 5. Kleinberg and Tardos, "Algorithm Design", Pearson, 2006.

Course Code	:	CS7104
Course Title	••	Problem Solving using Python and R
Number of Credits	••	0-0-3-2
Prerequisites (Course code)	:	None
Course Type	••	Core

CO1	Develop solutions to real world problems using Python data structures, Functions
	and Object orientation concepts.
CO2	Read and write data from/to files for processing using Python.
CO3	Make use of Python Modules and Packages to solve complex problems.
CO4	Perform statistical modelling using R

Python: variables, expressions, statements, operators, strings, Data structures: List, Dictionary, Tuples Functions: parameters, return values, local and global scope, recursion, lambda functions and function composition.

Object orientation – Classes, Objects, methods, Operator overloading, and Inheritance, Method resolution order. Files: Text files, reading and writing, Handling CSV, Json files, Object serialization, Errors, and Exception handling.

Python Modules and Packages: Python Standard Library- Libraries for Data science: Numpy, Pandas, Matplotlib, Scikit-Learn, SQLite.

R–Data sets - Data Visualization -Vector functions- Matrices and arrays- Matrix algebra-Random numbers- sampling and shuffling- Probability functions.

R for Statistical computing- Classical tests -Statistical modelling- Regression- Analysis of Variance- Analysis of Covariance- Bayesian Statistics.

Course Code	:	CS7105
Course Title	••	Operating Systems Fundamentals
Number of Credits	:	3-0-2-4
Prerequisites (Course code)	:	None
Course Type	:	Core

CO1	Use system calls for managing processes, memory, and the file system.
CO2	Explore various types of operating systems including UNIX, Linux, Android,
	andWindows.
CO3	Explore the functionalities of distributed and mobile operating systems.

Course Content:

Operating System concepts - OS Structure – OS Services - System calls – Process management: Process Concept-Operations on process-Cooperating processes- Inter-process communication.Process scheduling-Scheduling algorithms.

Threads- Multithreading models – Containers - Process synchronization- critical-section – Synchronization hardware – Semaphores – Classic problems of synchronization – critical regions. Deadlocks: Characterization, Prevention, Avoidance, Detection, and Recovery.

Memory Management: Paging, segmentation, Demand Paging, Page Replacement, Allocation of Frames. File Concepts, Access and Allocation Methods, Free Space Management.

Disk Structure, Disk Scheduling and Disk Management. Protection and security, Distributed Operating Systems – Distributed system structure, Distributed file system, Mobile Operating systems.

Case Studies: UNIX, Linux, Android, and Windows Operating Systems.

- 1. Abraham Silberschatz, Peter B. Galvin and Greg Gagne, "Operating System Concepts",10th edition, John Wiley & Sons Inc., 2018.
- 2. Andrew S. Tanenbaum, and Herbert Bos, "Modern Operating Systems", 5th Edition, Pearson, 2022
- 3. William Stallings, "Operating Systems: Internals and Design Principles", 7th Edition,Prentice Hall, 2011.

Course Code	:	CS7106
Course Title	••	Data Structures Lab
Number of Credits	:	0-0-4-2
Prerequisites (Course code)	:	CS7106
Course Type	:	ELR

CO1	Write C/C++ programs for problem solving.
CO2	Implement linear and nonlinear data structures to solve real-time problems.
CO3	Perform searching and sorting techniques on different application domains.
CO4	Implement different algorithm design strategies to solve complex problems.

Course Content:

Exercises for learning basic features of C/C++ and exercises to implement various datastructures for real world applications.

Course Code	:	CS7107
Course Title	••	Python and R Lab
Number of Credits	••	0-0-4-2
Prerequisites (Course code)	:	None
Course Type	:	ELR

CO1	Write Python and R programs for problem solving.
CO2	Use Python libraries for data science.
CO3	Use R packages for statistical modelling.

Course Content:

Exercises for learning basic features of Python and R Programming.

SECOND SEMESTER

Course Code	:	CS7151
Course Title	••	Computer Organization and Architecture
Number of Credits	:	3-0-0-3
Prerequisites (Course code)	:	None
Course Type	:	Core

Course outcomes: At the end of the course, the student will be able to:

CO1	Understand basic structure and operation of digital computer.					
CO2	Understand the design of ALU to perform arithmetic and logic operations on fixed					
	point and floating numbers.					
CO3	Understand different types of instructions and addressing modes supported in the					
	instruction set of CPUs.					
CO4	Understand the design of control unit.					
CO5	Understand different types of memory devices, I/O communication techniques					
	andstandard I/O Interfaces.					

Course Content:

Number Systems - Binary Arithmetic - Boolean algebra –Karnaugh Map Simplifications– Fixed Point and Floating-point Arithmetic - IEEE 754 Floating-point Standard — Booth's Algorithm - Logic Gates -Combinational Circuits - Sequential Circuits.

Functional units of Computer – Bus Structure - Instruction Set Architecture - Instruction Formats Addressing Modes - Architecture and Instruction Set of 8086 Microprocessor – Reduced Instruction Set Computer (RISC), Complex Instruction Set Computer (CISC) Architecture.

Instruction Execution–Phases of Instruction - Control Unit Operation – Control Unit Design: Hardwired, Microprogrammed, and Nano programmed Control Unit Design – Instruction Pipeline - Data Hazards - Control Hazards - Structural Hazards - Techniques for handling Hazards – Arithmetic Pipeline - Pipeline Optimization Techniques.

Memory – Internal Memory – External Memory - Memory Hierarchy– Cache Memory – CachePerformance Improvement – Block Replacement Strategies - Associative Memory – Virtual Memory –Secondary Storage Devices: Disk and Tape Memory.

Accessing I/O Devices – Standard I/O Interfaces - Interface Circuits - Asynchronous Data Transfer - Programmed Input/output (I/O) – Interrupt Driven I/O – Direct Memory Access (DMA) – DMA Controller – Parallel Processor – Multi-core Processor – Mobile Processor – Embedded Processor – AMD Processor - Graphical Processing Unit (GPU) -Tensor ProcessingUnit (TPU).

- 3. William Stallings, "Computer Organization and Architecture", Global Edition, PearsonEducation, 2015.

- 4. John Patrick Hayes, "Computer Architecture and Organization", WCB/McGraw-Hill,1998.
- 5. M. Morris Mano, "Digital Logic and Computer Design", Pearson India, 2017.
- 6. M. Morris Mano, "Digital design", Prentice Hall, 2002.

Course Code	:	CS7152
Course Title	•	Theory of Computation
Number of Credits	:	2-1-0-3
Prerequisites (Course code)	:	None
Course Type	:	Core

CO1	Define languages by abstract, recursive definitions and regular expressions.
CO2	Design a finite automaton to recognize a given regular language.
CO3	Transform a language into regular expression or finite automaton or transition
	graph.
CO4	Define deterministic finite automata and nondeterministic finite automata.
CO5	Prove properties of regular languages and classify them.

Course Content:

Finite Automata : Introduction, Deterministic Finite Automata (DFA) - Formal definition, simpler notations (state transition diagram, transition table), language of a DFA. Nondeterministic Finite Automata (NFA)- Definition of NFA, language of an NFA, Equivalence of Deterministic and Nondeterministic Finite Automata, Applications of Finite Automata, Finite Automata with Epsilon Transitions, Eliminating Epsilon transitions, Minimization of Deterministic Finite Automata, Finite automata with output (Moore and Mealy machines) and Inter conversion.

Regular Expressions : Introduction, Identities of Regular Expressions, Finite Automata and Regular Expressions- Converting from DFA's to Regular Expressions, Converting Regular Expressions to Automata, applications of Regular Expressions. REGULAR GRAMMARS: Definition, regular grammars and FA, FA for regular grammar, Regular grammar for FA. Proving languages to be non-regular - Pumping lemma, applications, Closure properties of regular languages.

Context Free Grammar : Derivation Trees, Sentential Forms, Rightmost and Leftmost derivations of Strings. Ambiguity in CFG's, Minimization of CFG's, CNF, GNF, Pumping Lemma for CFL's, Enumeration of Properties of CFL (Proof's omitted).

Pushdown Automata : Definition, Model, Acceptance of CFL, Acceptance by Final State and Acceptance by Empty stack and its Equivalence, Equivalence of CFG and PDA. Turing Machines - Formal definition and behaviour, Languages of a TM, TM as accepters and TM as a computer of integer functions, Types of TMs.

Recursive and Recursively Enumerable Languages : Properties of recursive and recursively enumerable languages, Universal Turing machine, The Halting problem, Undecidable problems about TMs. Context sensitive language and linear bounded automata (LBA), Chomsky hierarchy, Decidability, Post's correspondence problem (PCP), undecidability of PCP.

- 5. Stefano Crespi Reghizzi, Luca Breveglieri, and Angelo Morzenti, "Formal Languages and Compilation", 3rd Ed., Springer, 2019.

Course Code	:	CS7153
Course Title	••	Advanced Statistical Techniques for Data Science
Number of Credits	:	3-0-0-3
Prerequisites (Course code)	:	None
Course Type	:	Core

CO1	Apply	statistical	techniq	ues for	real time	data	analysis	applications
-----	-------	-------------	---------	---------	-----------	------	----------	--------------

Course Content:

Principles of statistical inference- Formulation of problems with examples- Point estimation. Estimator and estimate-Criteria for good estimates. Method of moments estimation and maximum likelihood estimation - Fisher Information matrix- Properties of maximum likelihood estimator- Confidence intervals.

Basic multivariate statistics: multivariate descriptive statistics, multivariate distributions (normal, etc), multivariate inferential statistic.

Multivariate data- Analysis of variance (ANOVA), Multivariate analysis of variance (MANOVA)- Case study: MANOVA

Multiple linear regression- Multiple and partial correlation- Detection of Collinearity-Stepwiseregression.

Validation of model assumptions- Detection of outliers- influential observation and autocorrelation

Course Code	:	CS7154
Course Title	••	DBMS and Data Mining
Number of Credits	:	3-0-0-3
Prerequisites (Course code)	•	None
Course Type	:	Core

CO1	Illustrate the features of DBMS and models for designing databases
CO2	Apply logical database design principles in solving real world problems
CO3	Understand the concepts, algorithms, and techniques of data mining

Course Content:

Database system – Terminologies – Views – Data models – Database languages – Architecture - E-R Model – Extended E-R - Relational Model -Relational database design – Anomalies - Functional dependencies – 1NF to 5NF – Decomposition –Relational Query Languages – Relational Algebra – Tuple and domain Relational Calculus

SQL - Query processing and optimization – Transformation of relational expressions -Transaction – Properties – Concurrent execution – Serializability – Concurrency control – Protocols – Recovery System – Database Security - File organization.

Data Mining: Definition – Functionalities – Task Primitives – Integration with Database or Warehouse Systems – Issues – Data Sets – Attributes – Statistical Descriptions – Data Visualization – Measuring Data Similarity. Pre-processing: Data Reduction, Transformation, Discretization, Cleaning, and Integration.

Classification – Cluster Analysis – Outlier Analysis - Data Stream Mining, Mining Time Series, Text Mining, Data Stream Clustering, mining Big Data through data mining and analytical tools - Market Basket Analysis - Fuzzy Data Mining approaches – Rough Sets – Support Vector Machines – Genetic Algorithms.

Data warehousing – OLAP – Data Cubes - Mining Frequent Patterns, Associations and Correlations – Frequent Item set Mining Methods – Kinds of Association Rules – Constraint Based Frequent Pattern Mining.

Course Code	:	CS7155
Course Title	••	FOSS Lab
Number of Credits	:	0-0-4-2
Prerequisites (Course code)	:	None
Course Type	:	ELR

CO1	Use GitHub for software development and version control in teams.
CO2	Develop applications in FOSS environment.
CO3	Identify and evaluate various FOSS options for any software requirement.

Course Content:

Explore various open-source packages/technologies and apply them.

Course Code	:	CS7156
Course Title	:	DBMS and Data Mining Lab
Number of Credits	:	0-0-4-2
Prerequisites (Course	:	None
code)		
Course Type	:	ELR

CO1	Work with basic SQL commands.
CO2	Apply pre-processing techniques on data.
CO3	Work with a data warehouse.
CO4	Perform. association mining for realistic data.
CO5	Demonstrate classification, clustering in large data sets.

Course Content:

- 1. Exercises to construct and query databases.
- 2. Exercises to implement data mining algorithms using ENCOG and WEKA.

Course Code	:	CS8101
Course Title	•	Web Computing
Number of Credits	:	3-0-0-3
Prerequisites (Course code)	:	None
Course Type	:	Core

CO1	Design and develop web applications.
CO2	Understand client-side and server-side scripting and their applicability.

Course Content:

Internet and World Wide Web: Introduction to Internet, www, Internet browsers Netscape &Explorer, Introduction to Client Server Architecture/Computing, History of the web, Growth of the web, Protocols governing the web, resources of Internet, H/W & S/W requirements of Internet, Internet service providers, Internet Services, Internet Clients, and Internet Servers. Concept of E- Commerce and E-governance.

Markup Languages: Introduction to HTML, Formatting Tags, Links, Lists, Tables, Frames, Forms, Comments in HTML, DHTML and XML Documents, Data Interchange with an XML document, Document type definition, Features and Applications, Working with Style sheets.

Client-side Scripting: Scripting basics, Introducing JavaScript, Documents, Statements, Functions, Objects in Javascript, Events and Event handling, Arrays, Forms, Buttons, Checkboxes, Text Fields, and Text Area – Applications using Javascript – Extensions of Javascript.

Server-side Scripting: Introduction to server-side scripting language, RMI, The Problem with Servelet. JSP Application Design with MVC Setting Up and JSP Environment: Installing the Java Software Development Kit, Tomcat Server & Testing Tomcat-Generating Dynamic Content, Using Scripting Elements Implicit JSP Objects, Conditional Processing – Displaying Values Using an Expression to Set an Attribute, Declaring Variables and Methods Error Handling and Debugging - Sharing Data Between JSP pages, Requests and Users Passing Control and Date between Pages – Sharing Session and Application Data – Memory Usage Considerations – Applications using server side scripting.

PHP: Basic command with PHP examples, Connection to server, creating database, selecting a database, listing database, listing table names creating a table, inserting data ta, altering tables, queries, deleting database, deleting data and tables, PHP myadmin and database bugs – Applications using PHP - Django Framework.

Course Code	:	CS8103
Course Title	:	Artificial Intelligence and Machine Learning
Number of Credits	:	3-0-0-3
Prerequisites (Course code)	:	None
Course Type	:	Core

CO1	Build simple knowledge-based systems
CO2	Apply knowledge representation and machine learning techniques to solve real-
	worldproblems.
CO3	Apply computational Intelligence techniques.

Course Content:

Introduction to Artificial Intelligence -Foundations of AI, Philosophy of artificial intelligence, problem solving, search techniques, constraint satisfaction, and game playing - minimax, Alpha beta pruning.

Knowledge Representation and Reasoning -Ontologies-foundations of knowledge representation and reasoning-representing and reasoning about objects-relations- eventsactions- time- and space- predicate logic-situation calculus-description logics-reasoning with defaults, -reasoning about knowledge-sample applications.

Representing Knowledge and reasoning in an Uncertain Domain- Bayes rule-Bayesian networks-probabilistic inference-sample applications- Planning: planning as search- partial order planning- construction and use of planning graphs.

Machine learning- Supervised learning - Regression, Classification; unsupervised learning-Clustering; Reinforcement learning, Computational Intelligence- Fuzzy systems, Swarm intelligence, neural networks models- Learning through neural nets; Basics of Deep learning

Applications of Artificial Intelligence- Natural Language Processing, Speech recognition, Computer vision, Expert systems

Course Code	:	CS8103
Course Title	:	Object Oriented Software Engineering
Number of Credits	••	3-0-0-3
Prerequisites (Course code)	:	None
Course Type	:	Core

CO1	Practice the principles of object-oriented software development and various CASE
	tools.
CO2	Convey design decisions using UML.
CO3	Compute cost of software development and measure quality of software.

Course Content:

Introduction-Software Development Lifecycle Models - Conventional Software Life Cycle Model - Object-Orientation – Objects and Classes – Features-Object Oriented Software Life Cycle Models -Object oriented Methodologies – Object–Oriented Modeling – Terminologies.

Software Requirements Elicitation and Analysis - Software Requirement – Requirements Elicitation Techniques – Characteristics - Software Requirements Specification (SRS) Document - Requirements Change Management - Object Oriented Analysis - Overview of Cost Estimation Techniques - Agile development – Classification of methods – Agile project management - Lifecycle – Work products, Roles, and Practices values – Process mixtures– Adoption strategies – Understanding SCRUM.

Software Design - Object Oriented Design - UML-Refinement of Use Case Description – Refinement of classes and relationships - Construction of class diagrams - Development of Details – Design and Creation–Generating Test cases from User Cases – Object Oriented Design principles.

Software Implementation - Quality and Metrics - Software Implementation – Tools and Techniques – Software quality – Models - Measurement basic - analyzing the metric data-Metrics for measuring size and structure – Measuring software quality - Object oriented metrics

Software Testing and Maintenance - Software verification techniques – Checklist: a popular –verification tool -Functional Testing – Structural Testing – Object Oriented Testing - Class testing–State based testing – Mutation testing - Levels of testing -Tools - Software maintenance – Categories – Challenges – Maintenance of Object-oriented Software – Software rejuvenation – Configuration management – Regression testing.

Course Code	:	CS8104
Course Title	:	Artificial Intelligence and Machine Learning Lab
Number of Credits	:	0-0-4-2
Prerequisites (Course code)	:	None
Course Type	:	ELR

CO1	Apply the various search techniques.
CO2	Apply knowledge representation and reasoning techniques.

Course Content:

Exercises to implement various AI and ML Techniques.

Course Code	:	CS8105
Course Title	:	Project work – Phase I
Number of Credits	:	2

Course outcome: To publish papers in conference or journal

Course Content:

- To explore various research papers pertaining to chosen domain and arrive at a survey.
- To implement and demonstrate the studies done.

Course Code	:	CS8151
Course Title	:	Project work – Phase II
Number of Credits	:	10

Course outcome: To publish papers in conference or journal

Course Content:

• Internal/External project work of 6 months duration with submission of thesis and viva-voce examination.

ELECTIVES

Course Code	:	CS7111
Course Title	:	Internet of Things
Number of Credits	:	3-0-0-3
Prerequisites (Course code)	:	None
Course Type	:	Elective

Course outcomes: At the end of the course, the student will be able to:

CO1	Understand the working of IoT devices
CO2	Develop program for IoT devices
CO3	Develop applications using IoT devices

Course Content:

IoT Fundamentals: IoT Architecture and Protocols, IoT Platforms, IoT Components and Communication Technologies, IoT Sensors: Temperature, Moisture, Light, Acoustic & Noise, Water level, Presence & Proximity, Motion, Gyroscope, Chemical, Image; IoT actuators, IoT Examples, IoT Challenges.

IoT Protocols: Protocol Standardization – Efforts – M2M and WSN Protocols – SCADA and RFID Protocols – Unified Data Standards – IEEE 802.15.4 – BACNet Protocol – Modbus–Zigbee Architecture – Network layer –LowPAN - CoAP – Security.

Arduino Uno Architecture: Arduino Programming, IDE Setup, Writing Arduino Software, Arduino Libraries, Basics of Embedded C programming for Arduino, Integration of Sensors and Actuators with Arduino, Introduction to Raspberry Pi, Implementation of IoT with Raspberry Pi.

Basics of Wireless Networking: Introduction to ESP8266 Wi-Fi Module, Wi-Fi libraries, Web server- introduction, installation, configuration, Posting sensor(s) data to web server, IoT Cloud platforms, ThingSpeak API and MQTT, Interfacing ESP8266 with Web services.

IoT Case Studies and Real-World Applications: Smart Cities and Smart Homes, Connected Vehicles, Smart Grid, Smart Farming, Industrial IoT, SCADA Networks, Medical IoT, Activity Monitoring.

Wiley & Sons, 2013.4. Cuno Pfister, "Getting Started with the Internet of Things: Connecting Sensors and Microcontrollers to the Cloud", Maker Media, 2011.

Course Code	:	CS7112
Course Title	:	Cyber Security
Number of Credits	:	3-0-0-3
Prerequisites (Course code)	••	None
Course Type	:	Elective

CO1	Understand fundamentals of cyber security.
CO2	Study and analyze cryptographic and forensic methods.
CO3	Analyze the network and application security issues.
CO4	Explore the nature and logic behind security threats on the cyber space as an ethical
	hacker.
CO5	Understand fundamentals of cyber security.

Course Content:

Terminology of security : CIA - Security Models - Security and Privacy, Secure software development – Attack and Mitigation – Vulnerability, Threat, Risk

Cryptography: Classical Cryptography, Modern Cryptography – Forensics -watermarking - finger printing – Steganography - Biometrics

Network Security : Wireless Security, IDS and IPS, Network Intrusion Management Tools, Unified Threat management (UTM), Malware

Application Security: Web application firewall (WAF), Software Security, Mobile Security, Edge Security.

Data Security: Block chain, Bitcoins, Hacking Tools, and Techniques.

Course Code	:	CS7113
Course Title	:	Cloud and Edge Computing
Number of Credits	:	3-0-0-3
Prerequisites (Course code)	:	None
Course Type	:	Elective

CO1	Acquire Knowledge on the concepts and technologies of Cloud Computing.
CO2	Define the principles of virtualization
CO3	Identify the Service Oriented Architecture for Distributed Computing workflow.
CO4	Acquire Knowledge on the concepts and technologies of Edge Computing.

Course Content:

Overview of Computing Paradigms: Distributed Systems Models and Enabling Technologies - Cloud Computing Properties and Characteristics - Business Drivers for Adopting Cloud Computing

Introduction to virtualization : Different Approaches to Virtualization - Server, Storage, Network Virtualization - Virtual Machine Provisioning and Manageability - VM Placement- VM Migration - Hypervisors - Case studies: VMware, KVM, Xen – Containers

Service Science : Service Oriented Architecture - Web Services: SOAP, WSDL, UDDI - Web Services Discovery and Composition - REST based Web Services

Cloud Computing Architectur : Cloud Computing Service Delivery Models: Infrastructure as a Service (IaaS), Platform as a Service (PaaS), Software as a Service (SaaS) Deployment Models: Public cloud, Private cloud, Hybrid cloud - Data Centre Design and Management - Service Level Agreements (SLAs) – Pricing Models of Cloud -Migrating to Cloud – Cloud Simulators - Cloud Security Risks - Case Studies: Amazon AWS, Microsoft Azure, Amazon EC2, Google Cloud

Edge computing Concepts : Reference Architecture - Edge Computing in the IoT–Edge Analytics and Data Management -Use Cases

Course Code	:	CS7114
Course Title	:	Mobile Computing
Number of Credits	:	3-0-0-3
Prerequisites (Course code)	:	None
Course Type	:	Elective

CO1Understand concepts of Mobile Communication.CO2Analyse next generation Mobile Communication System.CO3Understand network and transport layers of Mobile Communication
CO2 Analyse next generation Mobile Communication System.CO3 Understand network and transport layers of Mobile Communication
CO3 Understand network and transport layers of Mobile Communication
eos enderstand network and transport hypers of whome communication.
CO4 Analyze various protocols of all layers for mobile and ad hoc wireless
communication networks.
CO5 Understand IP and TCP layers of Mobile Communication.
CO5 Understand IP and TCP layers of Mobile Communication.

Course Content:

Detailed Introduction of Mobile Computing: History, Types, Benefits, Application, Evolution, Security Concern regarding Mobile Computing, Different Propagation Modes, Wireless Architecture, and its types, needs of mobile user, The cellular concept: Cellular system, hexagonal geometry cell and concept of frequency reuse, Channel Assignment Strategies Distance to frequency reuse ratio

Telecommunication System: GSM: - Channel allocation, call routing Architecture, PLMN interface, addresses and identifiers, network aspects, frequency allocation, authentication and security, Handoffs Technique. GPRS: network operation, data services, Applications, Billing and charging

Mobile IP: Need of mobile IP, IP packet delivery, Agent Discovery, Registration, Tunnelling and encapsulation, Route optimization, IP Handoff

Mobile Transport Layer: Overview of Traditional TCP and implications of mobility control. Improvement of TCP: Indirect TCP, Snoop TCP, Mobile TCP, Fast Retransmit/fast recovery, Time-out freezing, Selective retransmission, Transaction-oriented TCP. Wireless Application Protocol: Introduction of WAP, WAP applications, WAP Architecture, WAP Protocol Stack, Challenges in WAP

Mobile Ad Hoc wireless networks: Introduction, Benefits, Difference, Routing protocols for ad hoc wireless networks: DSDV and AODV, Introduction to 4G: Introduction, features and challenges, Applications of 4G, 4G network architecture

- 1. Asoke K Telukder, and Roopa R Yavagal, "Mobile Computing Technology, Applications and service creation", TMH, 2017.
- 2. Raj Kamal, "Mobile Computing", Oxford, 2018.

Course Code	:	CS7115
Course Title	:	Cryptography and Blockchain Technology
Number of Credits	:	3-0-0-3
Prerequisites (Course code)	:	None
Course Type	:	Elective

CO1	Recall the basic network security concepts.
CO2	Apply Cryptographic Algorithms
CO3	Describe the history, types, and applications of Blockchain.
CO4	Gain familiarity with cryptography and Consensus algorithms.

Course Content:

Introduction : Security Trends-The OSI Security Architecture, Security Attacks, Security Services and Security Mechanisms, A model for Network Security-Classical Encryption Techniques.

Cryptographic Algorithms : Number Theory- Modern Block Ciphers: DES, 3DES, AES, Blowfish, CAST-128 - Stream Cipher - Public Key Cryptography: RSA, Diffie-Hellman, Elgamal, ECC.

Data Integrity Algorithms: MD5 message digest algorithm - Secure hash algorithm (SHA) Digital Signatures: Digital Signatures - authentication protocols - digital signature standards (DSS) - proof of digital signature algorithm - Authentication Applications: Kerberos and X.509 directory authentication service - electronic mail security - pretty good privacy (PGP) - S/MIME.

Introduction to Blockchain: Distributed DBMS – Limitations of Distributed DBMS, Introduction to Block chain – History, Definition, Distributed Ledger, Blockchain Categories Public, Private, Consortium, Blockchain Network and Nodes, Peer-to-Peer Network, Mining Mechanism, Generic elements of Blockchain, Features of Blockchain, and Types of Blockchain.

Blockchain Architecture: Operation of Bitcoin Blockchain, Blockchain Architecture – Block, Hash, Distributer P2P, Structure of Blockchain- Consensus mechanism: Proof of Work (PoW), Proof of Stake (PoS), Byzantine Fault Tolerance (BFT), Proof of Authority (PoA) and Proof of Elapsed Time (PoET)

- 2. William Stallings, "Network Security Essentials (Applications and Standards)", Pearson Education, India, 2017.
- 3. W. Mao, "Modern Cryptography Theory and Practice", Pearson Education, 2011.
- 4. Charles P. Pfleeger, and Shari Lawrence Pfleeger, "Security in computing", Prentice Hall of India, 2015.
- 5. Imran Bashir, "Mastering Blockchain: Distributed Ledger Technology, decentralization, and smart contracts explained", 2nd Edition, Packt Publishing Ltd, March 2018.
- 6. Bellaj Badr, Richard Horrocks, and Xun (Brian) Wu, "Blockchain by Example: A developer's guide to creating decentralized applications using Bitcoin, Ethereum, and Hyperledger", Packt Publishing Limited, 2018.

Course Code	:	CS7116
Course Title	:	Computer Graphics
Number of Credits	:	3-0-0-3
Prerequisites (Course code)	:	None
Course Type	:	Elective

CO1	Understand the concepts of computer graphics.
CO2	Understand the different computer graphic techniques.

Course Content:

Types of computer graphics: Graphic Displays- Random scan displays, Raster scan displays, Frame buffer and video controller, Points and lines, Line drawing algorithms, Circle generating algorithms, Midpoint circle generating algorithm, and parallel version of these algorithms.

Basic transformation: Matrix representations and homogenous coordinates, Composite transformations, Reflections, and shearing. Windowing and Clipping: Viewing pipeline, viewing transformations, 2-D Clipping Algorithms-Line clipping algorithms such as Cohen Sutherland line clipping algorithm, Liang Barsky algorithm, Line clipping against nonrectangular clip windows; Polygon clipping – Sutherland Hodgeman polygon clipping, Weiler and Atherton polygon clipping, Curve clipping, Text clipping.

Compression: Text and Image Compression: Introduction, compression principles, text compression, image compression, Audio and Video Compression: Introduction, audio compression, DPCM, ADPCM, APC, LPC, video compression, video compression principles, H.261, H.263, MPEG, MPEG-1, MPEG-2, and MPEG-4

3-D geometric primitives: 3-D Object representation, 3-D Transformation, 3-D viewing, projections, 3-D Clipping, Quadric surfaces, Spheres, Ellipsoid, Blobby objects, introductory concepts of Spline, Bspline and Bezier curves and surfaces.

Back Face Detection algorithm: Depth buffer method, A-buffer method, Scan line method, basic illumination models – Ambient light, Diffuse reflection, Specular reflection and Phong model, Combined approach, Warn model, Intensity Attenuation, Color consideration, Transparency and Shadows.

Course Code	:	CS7117
Course Title	:	Big Data Analytics
Number of Credits	:	3-0-0-3
Prerequisites (Course code)	:	None
Course Type	:	Elective

CO1	Comprehend the concepts of big data analytics.
CO2	Build web-intelligence applications exploiting big data using big data platforms
	basedon the 'map-reduce' parallel programming framework.
CO3	Effectively use NoSQL database for storage and retrieval of big data.

Course Content:

Big Data Overview : Classification of Digital Data, Big Data, Evolution of Big Data, Structuring Big Data, Elements of Big Data, Challenges with Big Data, Big Data Analytics, Future of Big Data, Big Data Use Cases (Social Network, Fraud Detection and Prevention, Retail Industry, Healthcare, etc.), Technologies for Big Data.

Hadoop – Hadoop Ecosystem, Hadoop Distributed File System, Components of Hadoop, Analysing the Data with Hadoop, Scaling Out, Hadoop Streaming, HDFS Design; MapReduce MapReduce Framework, Techniques to Optimize MapReduce Jobs, Anatomy of a Map Reduce Job Run, Failures, Job Scheduling, Shuffle and Sort, Task execution, Developing MapReduce Application.

NoSQL Databases – NoSQL, Characteristics of NoSQL, History of NoSQL, Types of NoSQL Data Models, CAP Theorem, MongoDB, Neo4j.

Frameworks – Hive Services, Data Types in Hive, Built-in Functions in Hive, Hive QL; The Pig architecture, Benefits and Properties of Pig, Pig Latin, Pig Operators; HBase, ZooKeeper, Mahout.

Data Visualization – Representing Visual Data, Techniques for Visual Data Representation, Types of Data Visualization, Applications of Data Visualization, Visualizing Big Data, Data Visualization Tools, Data Visualization with Tableau.

- 1. DT Editorial Services, "Big Data Black Book: (Covers Hadoop 2, MapReduce, Hive, YARN, Pig, R and Data Visualization)", India: Dreamtech Press, 2016.
- 2. Tom White, "Hadoop: The Definitive Guide", O'reilly Media, 4th Edition, 2015.

- 6. Paul Zikopoulos, Dirkde Roos, Krishnan Parasuraman, Thomas Deutsch, James Giles, and David Corrigan, "Harness the Power of Big Data The IBM Big Data Platform", Tata McGraw Hill Publications, 2012.

Course Code	:	CS7118
Course Title	:	Computational Intelligence
Number of Credits	:	3-0-0-3
Prerequisites (Course code)	:	None
Course Type	:	Elective

CO1	Apply intelligent technologies for various applications.
CO2	Model global optimization solutions for various real-life problems.

Course Content:

Introduction to Computational Intelligence : Intelligence machines - Computational Intelligence paradigms – Fuzzy logic - Fuzzy relationships - Fuzzy Sets - Operations on Fuzzysets - Fuzzy rules - Fuzzy inference systems - Fuzzy expert systems - Applications of Fuzzy Set theory to different branches of science and engineering

Neural Network : Biological foundation of Neural Network - Neural Model - Network Architectures - Perceptron Learning - Supervised and unsupervised learning neural networks - Hebbian Learning - Back-propagation - Associative Learning - Competitive Networks - Hopfield Network - Deep neural networks and learning algorithms - Applications - Case studies

Neuro Fuzzy Systems : Adaptive Neuro - Fuzzy Inference Systems - Architecture - Hybrid Learning Algorithm - Learning Methods that Cross-fertilize ANFIS and RBFN - Coactive Neuro Fuzzy Modelling - Framework Neuron Functions for Adaptive Networks - Neuro FuzzySpectrum

Evolutionary computation : Chromosomes - Fitness functions - Selection mechanisms - Genetic algorithms - Crossover - mutation – Convergence – Applications - Genetic programming - Evolution strategies - Evolutionary neural network - Case studies

Swarm Intelligence : Foundations - Examples – Metaheuristics - ACO method - Ant System –Birds – PSO – Firefly Algorithm - Applications - Case Studies

Course Code	:	CS7119
Course Title	:	Computer Vision and Pattern Recognition
Number of Credits :		3-0-0-3
Prerequisites (Course code)	rerequisites (Course code) : None	
Course Type :		Elective
Course outcomes: At the end of the course, the student will be able to:		
CO1 Apply fundamental algorithms in Image Processing and analyze their applicability		

CO1 Apply fundamental algorithms in Image Processing and analyze their applicability forreal time problems
 CO2 Design solutions for various computer vision and pattern recognition problems.

Course Content:

Fundamentals of Image Formation, Transformation: Orthogonal, Euclidean, Affine, Projective, etc; Fourier Transform, Convolution and Filtering, Image Enhancement-Histogram Processin

Edge Detectors : Canny, LOG, DOG; Line detectors (Hough Transform), Corners -Harris and Hessian Affine, Orientation Histogram, SIFT, SURF, HOG, GLOH, Scale-Space Analysis- Image Pyramids and Gaussian derivative filters, Gabor Filters and DWT.

Image Segmentation: Region Growing, Edge Based approaches to segmentation, Graph-Cut, Mean-Shift, MRFs, Texture Segmentation; Object detection.

Motion analysis: Background Subtraction and Modeling, Optical Flow, KLT, Spatio-TemporalAnalysis, Dynamic Stereo; Motion parameter estimation.

Pattern Analysis: Clustering: K-Means, K-Medoids, Mixture of Gaussians, Classification: Discriminant Function, Supervised, Un-supervised, Semi-supervised; Classifiers: Bayes, KNN, ANN models; Dimensionality Reduction: PCA, LDA, ICA; Nonparametric methods.

Course	e Code	:	CS7120
Course Title		:	Soft Computing Techniques
Number of Credits		:	3-0-0-3
Prerequisites (Course code)		:	None
Course Type		:	Elective
Course outcomes: At the end of the course, the student will be able to:			
CO1	Explain the basics of soft computing		
CO2	Apply neural network principles and algorithms for given problems.		
CO3	3 Apply the principles of fuzzy and hybrid algorithms for real time applications.		
CO4	Solve problems using evolutionary algorithms.		

Course Content:

Soft Computing: Introduction, Soft Computing verses Hard Computing, Need, Tools and techniques, Applications

Artificial Neural Network (ANN): Biological foundation of Neural Network, Neural Model and Network Architectures, Perceptron Learning, Supervised Hebbian Learning, Back- propagation, Associative Learning, Competitive Networks, Hopfield Network, Computing with Neural Nets, and applications of Artificial Neural Network

Evolutionary and Genetic Algorithms: Concepts, Operators, Function Optimization, Dominance, Swarm Intelligence, Colony systems, Modeling Collective Behaviour in Social Insects, Division of Labor and Task Allocation, Applications.

Fuzzy Logic: Fuzzy Sets, Operations on Fuzzy sets, Fuzzy Relations, Fuzzy Systems, Fuzzy controller, Fuzzy Decision Making, Fuzzy Clustering, Applications. Rough sets: Imprecise Categories Approximations and Rough Sets, Reduction of Knowledge, DecisionTables, and Applications.

Neuro Fuzzy and Soft Computing: Adaptive Neuro-Fuzzy Inference System Architecture, Hybrid Learning Algorithm, Learning Methods that Cross-fertilize ANFIS and RBFN, Coactive Neuro Fuzzy Modeling, Framework, Neuron Functions for Adaptive Networks, Neuro Fuzzy Spectrum. Hybridization of other techniques

Course Code	:	CS7121
Course Title	:	Defensive and Secure Software Development
Number of Credits	:	3-0-0-3
Prerequisites (Course code)	:	None
Course Type	:	Elective

CO1	Understand software security fundamentals.
CO2	Develop secure software.
CO3	Use secure coding practices in software development.

Introduction : Types of security; Correctness vs. security; Assets and threats; Security mindset; Layers of security – Software security - Why it is important; Security in the SoftwareDevelopment Lifecycle (SDLC); Kinds of attacks; How to design security in; Defense in depthand breadth; Principles, tactics, guidelines, and standards.

Programming Language Overviews : Overviews of secure software of JavaScript, Java, C, and C++ - Security in design - Domain-driven design; Requirements definitions; Threat models - Security in Programming - Defensive coding; Immutability; Design by contract; Validation (origin, size, bounds, lexical, syntactic, and semantic checking); Integrity maintenance (defensive copying, failing fast, managing exceptions); Secure error handling; Mitigating dataleaks; Reducing complexity.

Security in testing and operations : Types of testing (including fuzz testing and pen testing); SecOps; Continuous integration – Language dependent guidelines and standards for secure programming in C, C++, Java, and JavaScript – Cryptology - math and the algorithms behind cryptography, cryptanalysis, encryption, and hashing

Authentication and Authorization : difference between Authentication and Authorization; Passwords, hashing and salting; tokens; Defining a good permission system; Digital signatures;SSO; SAML and OAuth.

Web security : OWASP - CWE and CVE - compare Firebase with systems that use a traditional backend - Network Security: Internet architecture and security issues with TCP/IP; what is transport-layer security and how does it work; AWS IAM – Privacy -Privacy vs. security; Expectations

Course	e Code	:	CS7122
Course	e Title	:	Software Verification and Validation
Numb	er of Credits	:	3-0-0-3
Prereq	uisites (Course	:	None
code)			
Course	е Туре	:	Elective
Course outcomes: At the end of the course, the student will be able to:			
CO1	Understand the basic concepts of software engineering.		
CO2	Practice the application principles of Software testing.		
CO3	Analyze the process of software verification and validation.		

Course Content:

Introduction : Software engineering - Software Development Life Cycles Models, Conventional Software Life Cycle Models- Object Orientation - Objects and Classes, Features, Object Oriented Software Life Cycle Models, Object oriented Methodologies, Object – Oriented Modeling – Terminologies.

Introduction to software testing techniques : Software Implementation - Quality and Metrics - Software Implementation – Tools and Techniques - Software quality – Software quality models - Measurement basic - analyzing the metric data - Metrics for measuring size and structure – Measuring software quality object-oriented metrics – Overview of Scala for Implementation.

Introduction to Software testing strategies : Software Testing Fundamentals: Testing Objectives, Testing Principles, Testability, Test Case Design, White-Box Testing, Basis Path Testing: Flow Graph Notation, Cyclomatic Complexity, Graph Matrices, Control Structure Testing: Condition Testing, Data Flow Testing, Loop Testing, Black-Box Testing: Equivalence Partitioning, Boundary Value Analysis, Comparison Testing, Orthogonal Array Testing, Testing for Specialized Environments, Architectures, and Applications: Testing GUIs, Testing of Client/Server Architectures, Testing Documentation and Help Facilities, Testing for Real-Time Systems.

A Strategic Approach to Software Testing: Verification and Validation, Organizing for Software Testing, A Software Testing Strategy, Criteria for Completion of Testing, Strategic Issues, Unit Testing: Unit Test Considerations, Unit Test Procedures, Integration Testing: Top-down Integration, Bottom-up Integration, Regression Testing, Smoke Testing, Comments on Integration Testing, Integration Test Documentation, Validation Testing, System Testing.

Software Quality: McCall's Quality Factors, FURPS, ISO 9126 Quality Factors, The Transition to a Quantitative View, A Framework for Technical Software Metrics: The Challenge of Technical Metrics, Measurement Principles, The Attributes of Effective SoftwareMetrics, Metrics for Specification Quality, Metrics for the Design Model.

Course Code	:	CS8111
Course Title	:	GPGPU Programming
Number of Credits	:	3-0-0-3
Prerequisites (Course code)	:	None
Course Type		Elective

CO1	Analyze GPU Design for finding solutions.
CO2	Understand parallel programming paradigms.
CO3	Solving high performance computing problems using GPUs.

Course Content:

Introduction: CPU Design – Latency Oriented, GPU Design – Throughput Oriented – Need touse both - Software Cost - Scalability, Portability, GPU Introduction and Architecture, History of GPU Computation, GPGPU Frameworks, Graphics Processor Architecture, Compute Capability, Drop-In Libraries, OpenACC Directives

Parallel Programming Paradigms: Overview, Element Addressing - Multidimensional Kernel, Map, Gather, Scatter, Reduce, Scan, Thread Handling, Overview, Barrier Synchronization, Thread Synchronization Demo, Warp Divergence, Matrix Multiplication

CUDA Tools and APIs: Tools Overview, Using NSight Visual Studio and Eclipse, Running CUDA Apps, Debugging, Profiling, CUDA Architecture, CUDA APIs, CUDA 5.5 and 6 Features

CUDA programming: Overview, Compilation Process, Von Neumann Processor and CUDA Thread, Execution Model, first program in CUDA (Vector Addition), Location Qualifiers, Grid and Block Dimensions, Global Memory, Constant and Texture Memory, Shared Memory, Register and Local Memory, Data Movement, Error Handling, Device Introspection

Atomics: Overview, Need for Atomics, Atomic Functions, Atomic Sum, Monte Carlo Pi, Handling Events and Streams, Overview, Events, Event API, Event example, Pinned.

Course Code	:	CS8112
Course Title	:	Design Patterns
Number of Credits	:	3-0-0-3
Prerequisites (Course code)	:	None
Course Type	:	Elective

CO1	Solve common problems in software design with ease.
CO2	Analyze object-oriented design for patterns.
CO3	Represent design decisions more effectively with examples and architectural use
	cases

Course Content:

Introduction: Introduction to Design Patterns, Object Oriented Analysis and Design, Types of Design Patterns, Applications of Design Patterns, Anti Patterns, Code Refactoring Techniquesfor design patterns

Creational Patterns: Factory Methods, Static Factory Pattern, Singleton Pattern, Abstract Factory Pattern, Object Pool Pattern, Prototype Pattern, Builder Pattern, Telescopic Constructor Pattern

Structural Patterns: Adapter Pattern, Bridge Pattern, Composite Pattern, Decorator Pattern, Façade Pattern, Flyweight Pattern, Private Class Data, Proxy Pattern

Behavioral Design Patterns - I: Chain of responsibility Pattern, Command Pattern, Interpreter Pattern, Iterator Pattern, Mediator Pattern

Behavioral Design Patterns – II: Memento Pattern, Null Object Pattern, Observer Pattern, StatePattern, Strategy Pattern, Template method, Visitor Pattern

Cours	e Title	:	Compiler Design
Numb	er of Credits	:	3-0-0-3
Prerec	uisites (Course code)	:	None
Cours	е Туре	:	Elective
Course outcomes: At the end of the course, the student will be able to:			
CO1	Explain various phases of compiler.		
CO2	Explain various parsing techniques.		
CO3	Explain the process of intermediate code generation.		
CO4	4 Explain various code optimization techniques.		
CO5	Apply the knowledge of lex tool and yacc tool to develop a scanner and par- ser, respectively		

Course Content:

Introduction To Compiler - Language implementation methods – Structure of a compiler – Compiler writing tools - Lexical analysis – Role of Lexical Analyzer – Input buffering – Specification of tokens– Recognition of tokens – Regular language - Finite automata - Regular expression - From regular expression to finite automata - Scanner generator (lex,flex).

Syntax Analysis - General problem of describing syntax - Formal methods of describing syntax - Context-Free grammar -The parsing problem - Role of parsers –Top-Down parsers: LL(1) parser – Bottom-Up Parsers: LR(0), SLR(1), CLR(1), LALR(1), Operator precedenceparser –Recursive-Descent parser - Parser generator (yacc,bison).

Semantic Analysis and Run Time Environment - Attribute grammar -Syntax directed definition - Evaluation and flow of attribute in a syntax tree - Symbol table - Symbol attributes and management - Procedure activation - Parameter passing - Value return - Memory allocation –Variable scope.

Intermediate Code Generation - Different types of intermediate forms - Intermediate languages - Translation of different language features: declarations – assignment Statements – Boolean expressions – Control statements.

Target Code Generation And Code Optimization - Issues in code generation – Register allocation - Target code generation - Design of simple code generator –Machine-dependent code optimization, Machine-independent code optimization - Analysis: control-flow, and data-flow dependencies- Code improvement local optimization - Global optimization -Loop optimization - Peep-hole optimization - Architecture dependent code improvement: instruction scheduling (for pipeline), and loop optimization (for cache memory).

Cours	e Code	:	CS8114
Cours	e Title	:	Mobile Application Development
Numb	er of Credits	:	3-0-0-3
Prerec	uisites (Course code)	:	None
Cours	е Туре	:	Elective
Course outcomes: At the end of the course, the student will be able to:			
CO1	Describe the requirements for mobile applications.		
CO2	Develop design for mobile applications for specific requirements		
CO3	Implement the design using mobile application development frameworks.		

Course Content:

Introduction to mobile applications – Embedded systems - Market and business drivers for mobile applications – Publishing and delivery of mobile applications – Requirements gatheringand validation for mobile applications

Basic Design - Introduction – Basics of embedded systems design – Embedded OS - Design constraints for mobile applications, both hardware and software related – Architecting mobile applications – user interfaces for mobile applications – touch events and gestures – Achievingquality constraints – performance, usability, security, availability, and modifiability.

Advanced Design - Designing applications with multimedia and web access capabilities – Integration with GPS and social media networking applications – Accessing applications hosted in a cloud computing environment – Design patterns for mobile applications

Android - Introduction – Establishing the development environment – Android architecture – Activities and views – Interacting with UI – Persisting data using SQLite – Packaging and deployment – Interaction with server-side applications– Using Google Maps, GPS and WiFi –Integration with social media applications.

IOS - Introduction to Objective C - iOS features - UI implementation - Touch frameworks - Data persistence using Core Data and SQLite - Location aware applications using Core Location and Map Kit - Integrating calendar and address book with social media application - Using WiFi - iPhone marketplace.

Course Code	:	CS8115
Course Title	:	Augmented Reality and Virtual Reality
Number of Credits	:	3-0-0-3
Prerequisites (Course code)	:	None
Course Type	:	Elective

CO1	Understand the basic concepts of Augmented Reality
CO2	Understand the basic concepts of Virtual Reality

Course Content:

Introduction of Virtual Reality: Fundamental Concept and Components of Virtual Reality.Primary Features and Present Development on Virtual Reality.

Multiple Models of Input and Output Interface in Virtual Reality: Input -Tracker, Sensor, Digital Glove, Movement Capture, Video-based Input, 3D Menus & 3D Scanner etc. Output - Visual /Auditory / Haptic Devices.

Visual Computation in Virtual Reality: Fundamentals of Computer Graphics. Software andHardware Technology on Stereoscopic Display. Advanced Techniques in CG: Management of Large-Scale Environments & Real Time Rendering, Interactive Techniques in Virtual Reality: Body Track, Hand Gesture, 3D Manus, Object Grasp.

Development Tools and Frameworks in Virtual Reality: Frameworks of Software Development Tools in VR. X3D Standard; Vega, MultiGen, Virtools etc, Application of VR in Digital Entertainment: VR Technology in Film & TV, Production. VR Technology in Physical Exercises and Games. Demonstration of Digital Entertainment by VR.

Augmented and Mixed Reality: Taxonomy, technology and features of augmented reality, difference between AR and VR, Challenges with AR, AR systems and functionality, Augmented reality methods, visualization techniques for augmented reality, wireless displays in educational augmented reality applications, mobile projection interfaces, marker-less tracking for augmented reality, enhancing interactivity in AR environments, evaluating AR systems.

Course Code	:	CS8116
Course Title	:	Fault Tolerance Systems and Techniques
Number of Credits	:	3-0-0-3
Prerequisites (Course	:	None
code)		
Course Type		Elective
Course outcomes: At the end of the course, the student will be able to:		
CO1 Understand the bas	Understand the basic concepts of fault tolerance.	

CO2 Practice the application principles of fault tolerance.

CO3 Analyze the fault tolerance in hardware and software level.

Course Content:

Introduction to Fault-Tolerance: Error, Faults and Failures; Reliability and Availability; Dependability Measures, Mathematical Reliability Modeling: Probability Basics; Reliability and Availability Modeling, Analysis using Markov Models

Hardware Fault-Tolerance: Canonical and Resilient Structures; Reliability Evaluation Techniques and Models; Processor-level Fault Tolerance; Byzantine Failures and Agreements

Information Redundancy: Error Detection/Correction Codes (Hamming, Parity, Checksum, Berger, Cyclic, Arithmetic); Encoding/Decoding circuits; Resilient Disk Systems (RAID), Fault-Tolerant Networks: Network Topologies and their Resilience; Fault-tolerant Routing

Software Fault-Tolerance: Single-Version Fault Tolerance; N-Version Programming; Recovery Approach; Exception and Conditional (Assert) Handling; Reliability Models, Check pointing: Optimal Check pointing; Check pointing in Distributed and Shared-memory Systems

Fault-Tolerant System Design/Applications: Defect-tolerance in VLSI Designs; Fault Detection in Cryptographic Systems.
